

The Curriculum Journey

Each King's High student experiences a range of subjects throughout Key Stage 3 (Years 7-9), providing them with a rounded education that provides a foundation for their studies later on in School.

In Year 7, girls study Mathematics, English, French, Art, Drama, Geography, History, Latin, PE, RS, Music, DT, Food, Science, Computer Science and Personal, Social and Health Education (PSHEE).

In Year 8, girls add a second modern language – either Spanish or German – and also begin to study Engineering. Girls are placed in sets in Mathematics and in Modern Languages; they also begin to study the sciences separately.

In Year 9, similar breadth and setting arrangements are provided. During the Spring Term of Year 9, girls make their choices for GCSEs.

At Key Stage 4 (Years 10-11) the majority of girls study 10 GCSEs. There are six core GCSE subjects. Students then opt for an additional three or four subjects which are listed in the Academic Handbook below.

Our core subjects are Mathematics, English Language and English Literature and the three subjects of Science separately: Biology, Chemistry and Physics.

The girls have regular PE/Games sessions. In addition, they select a further four GCSE subjects from: French, German, Spanish, Latin, Geography, History, Religion and Philosophy, Music, Art, Drama, DT (product design), Food Preparation and Nutrition, Physical Education and Computer Science. Further details about the specifications can be found in the GCSE booklet.

Girls then progress into the Sixth Form where they study A Levels, being able to choose freely from a range of over 20 subjects.
